About the Film:

Hopeville's Director Harvey Hubbell V sure didn't surf his way through school. Growing up with dyslexia, Harvey faced numerous challenges.

The worst? Learning how to read! And he's nowhere near alone.

America's reading levels have steadily been on the decline. However, there's a solution! Implementing evidence-based reading instruction across this country is the answer.

We've talked to scientists, educators and parents and we have evidence to show, when using the right teaching methods, we can drastically change the course of literacy in America.

We can't ignore this issue. We must win the Reading Wars and change reading instruction for generations to come.

This isn't just a movie. It's a movement.
